The chips are primarily silver with a gold star in the center, but some are red with a white heart. The coins are stacked in several rows, creating a sense of depth and abundance. The lighting is dramatic, with highlights on the metallic surfaces of the coins and chips.

MAIN GAME

The coin cannon’s aim is automatically adjusted based on the game’s mechanics, ensuring precise coin placement on the playfield. Once aligned, the cannon autonomously launches the coins, continuously releasing them in a strategic manner without any player intervention.

GAME OUTCOME

Winning and getting a payout involves pushing coins and coloured chips off the ledge. Each coloured chip has a monetary value defined in the payable. The more valuable the chip, the higher the payout.

The Bonus chip offers additional winning opportunities.

BONUS GAME

A Bonus chip, a special coloured token, when pushed off the ledge, triggers the Bonus wheel to spin, initiating the Bonus round.

The prize you win is determined by the segment where the wheel comes to a stop.
