UNIQUE ADDITION TO OUR RETAIL PORTFOLIO

Dream Catcher – the unique and exciting addition to our retail portfolio, based on the extremely popular money wheel game!

Dream Catcher is a unique game of chance played using a super-sized money wheel. Around the wheel and the game host is a state-of-the-art multi-camera studio installation with light and sound effects auto-synchronised to the game action.

The Dream Catcher wheel is split into 54 equal segments, separated by pins. Each segment, except for two, is marked with a number.

Dream Catcher is different from other money wheels in that it features 2x and 7x payout multipliers and a fully immersive gaming experience for maximum excitement and player engagement. What's more, there is the potential to multiply wins many times over if the wheel stops on a multiplier segment on successive spins. The winnings can keep multiplying until a default maximum win of €100,000 or RAND 1,000,000 has been reached.

KEY BENEFITS

- Appealing to slot players
- 2x and 7x multipliers
- Potential to multiply wins many times over
- Easy and fun to play.

HOW TO PLAY

In Dream Catcher the aim is to predict which segment the wheel is going to stop on after the spin.

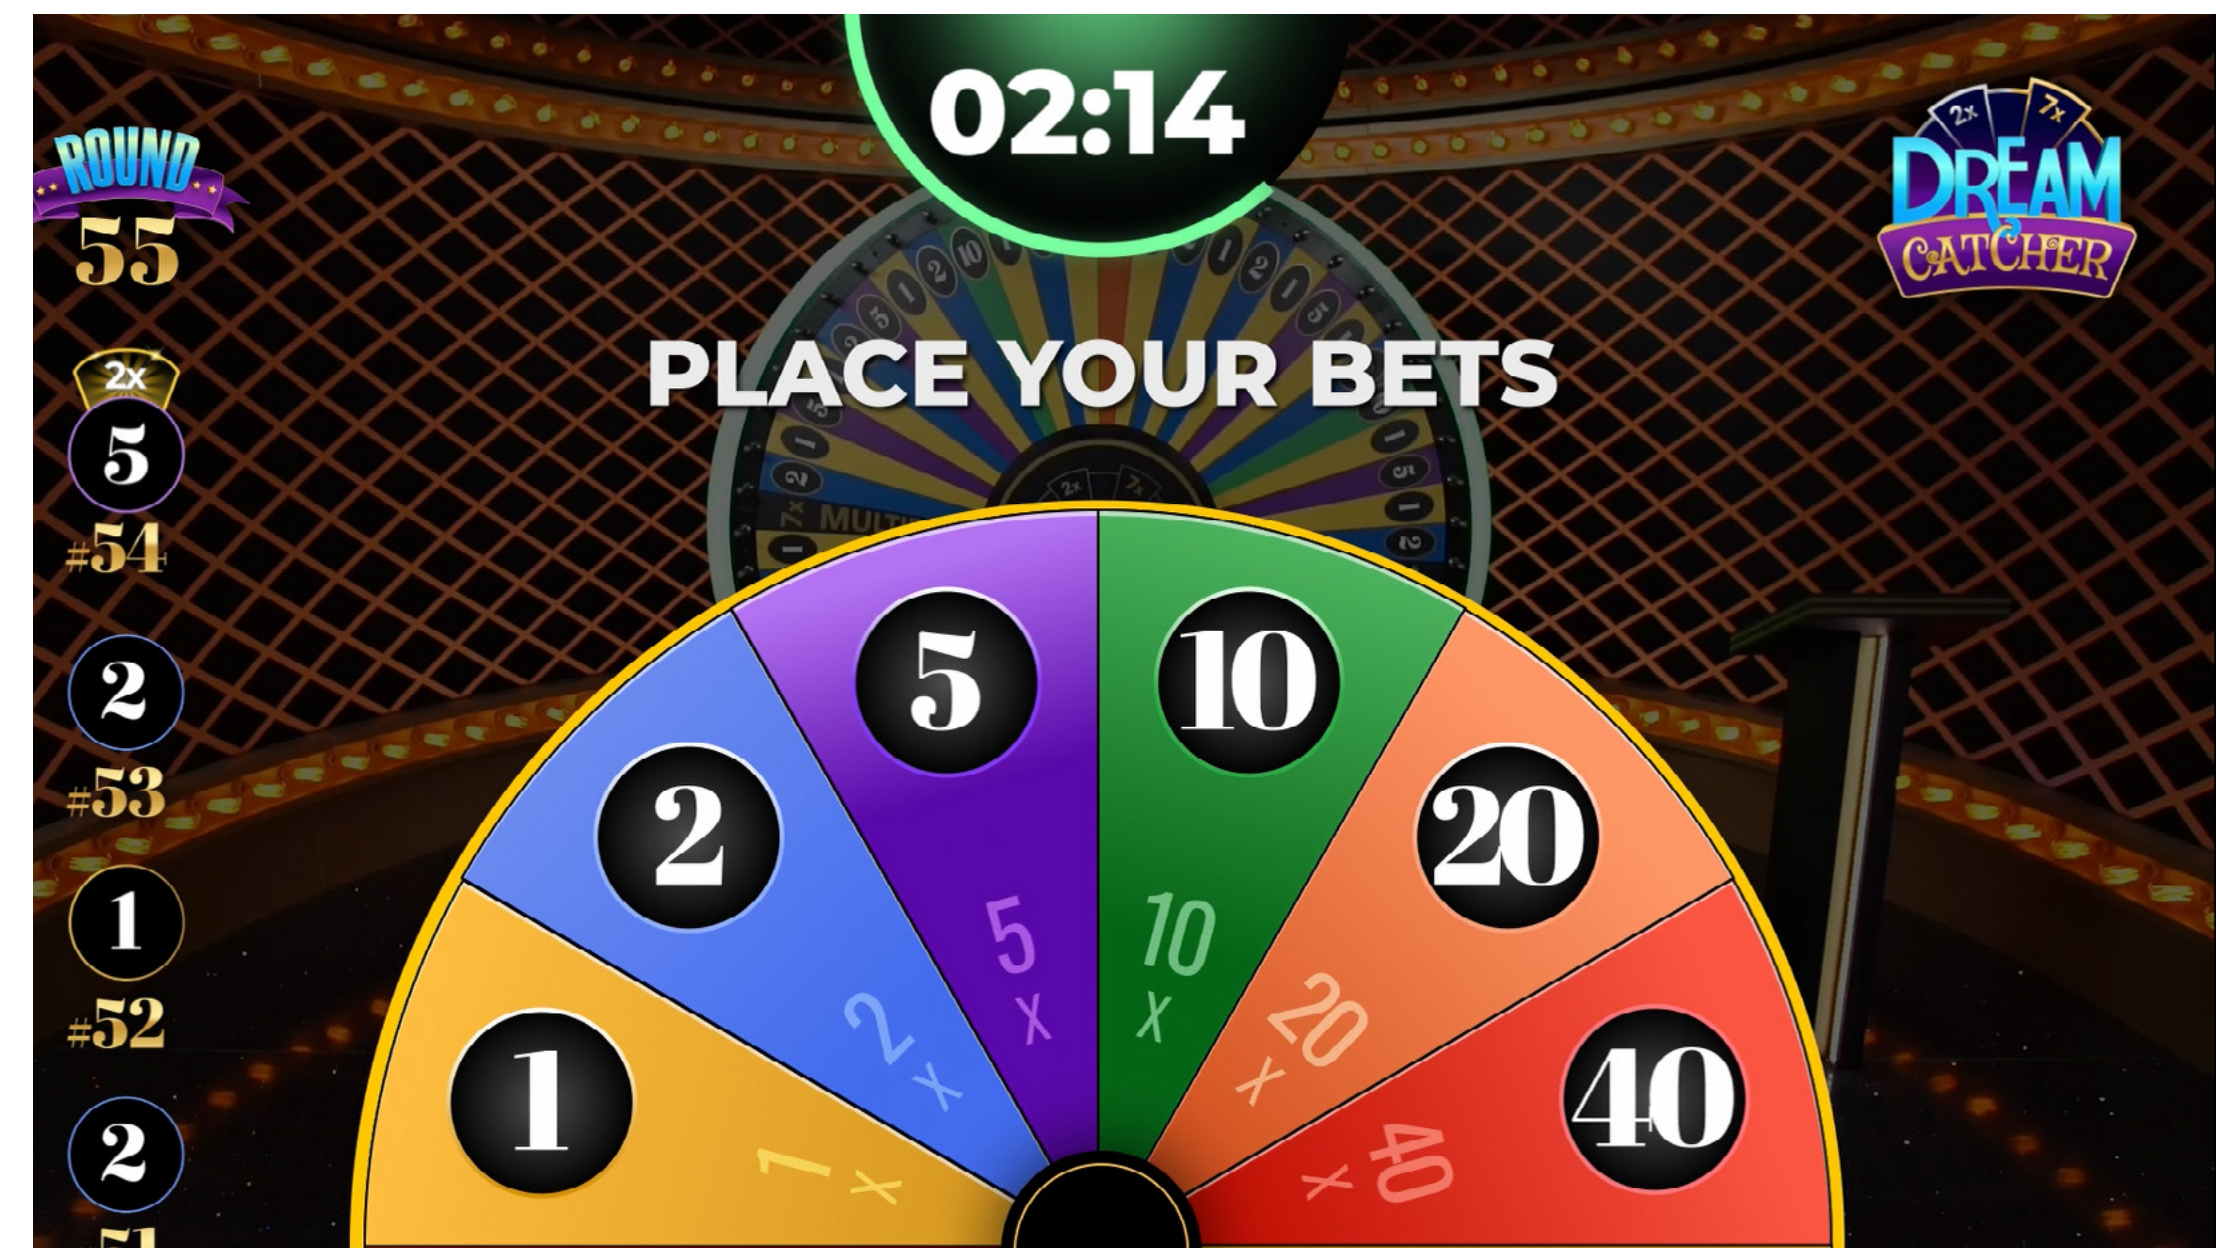

The wheel is divided into 54 segments, that are separated by pins. 52 of those segments are marked with a number (1, 2, 5, 10, 20 or 40) with a unique colour for each number. The other two segments – the 2x and 7x multipliers – act as bonus spins and multiply a player's next win.

The player bets on the number on which they think the wheel will stop. When the betting time has closed, the game host spins the wheel and when it comes to a stop, the winning number is indicated by the flapper at the top of the wheel.

Payouts for this game are simple, as they match the numbers on the wheel: for example, winning a bet on 5 pays 5 to 1.

If the wheel stops on a multiplier segment (2x or 7x), all bets remain in place and no new bets are allowed. The game host spins the wheel again and the outcome of the spin (1, 2, 5, 10, 20 or 40) will determine the winning odds as usual, but the odds will be multiplied depending on the multiplier number on which the wheel stopped in the previous round.

If the wheel stops on a multiplier two or more times in a row, then all bets remain in place and the multipliers stack – the multiplied payout from the last spin is multiplied again! The game host continues to spin the wheel until the spin stops on 1, 2, 5, 10, 20 or 40.
